EDUCATION

Abbey Park High School

Grade 12 Student, Average: **99%**

Oakville, Ontario

Expected Graduation: June 2026

- Awards: DECA International Career Development Conference (ICDC) 2x Qualifier, UWaterloo CCC Junior Perfect Score, UWaterloo CEMC 3x Honor Roll

EXPERIENCE

Nokia (Cloud & Network Services)

Jul 2025 – Aug 2025

Full-stack and AI/ML Intern

Kanata, Ottawa

- Architected an **autonomous 5G orchestration system** using a multi-agent LLM framework to resolve network alarms, replacing manual troubleshooting with AI-driven chain-of-thought analysis.
- Designed a **hybrid retrieval system** using lexical, semantic, and reranking methods to extract insights from tickets, configuration documents, and vector stores for alarm resolution.
- Created an intermediate text representation with a compiler to BPMNs, **cutting token generation costs by 66%**.
- Ported a legacy Java web app to **React.js** for visualizing network testing and configuration, **cutting load times by 50%**.

President & Full Stack Developer

September 2024 – Present

EurekaHacks 

Oakville, Ontario

- Built the application portal for Canada's largest high school hackathon with **Next.js** and **PostgreSQL** serving **400+ applicants**, implementing authentication, OAuth, and JWT session management.
- Built an RSVP system requiring confirmation after acceptance with automated emails, **reducing no-show rate by 76%**.
- Developed user-friendly application portal with form validation and error messaging, serving **32,000+ platform views**.
- Implemented **QR code-based check-in system** that scans attendee codes to track meal distribution, **reducing service times by 84%**.

Technical Lead

July 2023 – Present

Factful (Startup) 

Remote

- Led a team of 5** to develop an **LLM powered fact checking tool**, using **Flask** and **React.js** that scaled to **20k+ visits** during beta launch.
- Developed a RAG-based meta-search engine, achieving a **25% increase in Precision@5** by implementing semantic reranking to filter out non-authoritative sources.

PROJECTS

Phys.io | Python, OpenCV, Flask, React, Vite, Tailwind

- Developed a real-time physiotherapy monitoring tool; **secured 3rd place** at HackTheRidge.
- Uses **OpenCV** and custom image processing algorithms to evaluate accuracy of performed exercises.
- Built a responsive user interface with **React** and **Tailwind**.

Neural Network From Scratch | Python, Numpy

- Built a computer vision model from scratch to recognize MNIST digits with **98% accuracy without leveraging existing ML libraries**.
- Achieved a **500x–1000x speedup in training throughput** by refactoring iterative scalar loops into vectorized **matrix-matrix multiplications**, leveraging NumPy's C-optimized BLAS backends.

TECHNICAL SKILLS

Languages: Python, JavaScript, Typescript, HTML/CSS, Java, SQL, C, C++, Rust

Frameworks/Libraries: React.js, Node.js, Flask, Tailwind CSS, Vite, OpenCV, Numpy, PostgreSQL, Tensorflow, Keras, PyTorch

Tools: Git, Github, Bash, Docker, Kubernetes, Azure, Linux, Jira, Figma
